

KASTELANI REAGENT

REF 90100 - 100 mL.

24 months, storage at 2-25°C

DESCRIPTION:

Kastelani is a combined preparation with the properties of an antiseptic with an antifungal effect.

PHARMACOLOGICAL ACTION:

Kastelani substances have a wide spectrum of antiseptic and antifungal effects in case of damage to the skin and mucous membranes of the patient by infectious and fungal diseases.

FORM OF RELEASE:

Kastelani is available as a solution for external use by the patient. The composition of Kastelani includes: phenol, resorcinol, boric acid basic fuchsin.

INDICATIONS OF USE:

According to the instructions to Kastelani, it is used to treat and prevent skin diseases and their damage. For example, Kastelani's testimony tells us that the reagent is justified in case of abrasions, fungus, ulcers, cracks, surface wounds, pyoderma, erosion in the patient.

HOW TO USE:

According to the instructions to Kastelani, it must be applied externally. The solution is applied to the affected skin with a cotton swab or a stick 2 to 4 times a day. After drying Kastelani on the skin, you can apply additional medicines in the form of ointments or pastes.

SIDE EFFECTS:

According to reviews on Kastelani, the reagent can cause various allergic reactions, dermatitis, burning sensation and pain, visual impairment, and also addictive effect, as a result of which Kastelani ceases to have a therapeutic effect on the affected skin. Also, the use of Kastelani is not recommended for a large area of the skin, since it is possible to overdose with phenol, which has the property of actively evaporating from the surface of the skin after application, easily penetrates the blood and can cause dizziness, weakness, breathing disorder, sudden changes in blood pressure.

CONTRAINDICATIONS:

The use of Kastelani is not possible in cases of hypersensitivity to Kastelani components, detection of a tendency in the patient for increased skin sensitivity, allergic reaction to the drug, chronic dermatoses.

LIMITATIONS:

Kastelani's instructions prohibit the use of the reagent for pregnant and lactating women. Also, you should be careful when applying Kastelani on the mucous membranes, as it is possible to get chemical burns and irritation. It is also not recommended to assign Kastelani to patients under the age of 12 years. When applying Kastelani simultaneously with other drugs for external use, compounds with unpredictable skin effect can form.
